DIGIBYTE MEDIA INFO SHEET

HIGHLY DECENTRALIZED

DigiByte has never been funded through an ICO or significant amount of premined coins. There is no founder reward or a company controlling the DigiByte. It is a completely volunteer based and community driven blockchain.

MORE SECURE

DigiByte uses 5 cryptographic mining algorithms and real time difficulty adjustment to prevent malicious hash power centralization. 1 of which is Odocrypt changes itself every 10 days and thousands of nodes secure the network.

MUCH FASTER

DigiByte blocks occur every 15 seconds which is 40x faster than Bitcoin and 10x faster than Litecoin. Early SegWit implementation and blockchain rigidity enable up to 1066 on-chain transactions per second with negligible fees.

FORWARD THINKING

Over the past 6 years, DigiByte has repeatedly set itself apart with multiple blockchain firsts, such as DigiShield difficulty adjustment, MultiAlgo mining, SegWit, Digi-ID, DigiAssets, Odocrypt and Dandelion++ privacy protocol.

FACTS

Genesis block: Jan 10th 2014
Code: Open source MIT licensed
Concept: Public, Decentralized
UTXO based, PoW, MultiAlgo
Creator: Jared Tate
Ticker: DGB
Max supply: 21.000.000.000
Block time: 15 seconds
Max TPS: ~1066
Fees: Negligible
Nodes 10.000+ active

DigiByte is a rapidly growing open source blockchain created in early 2014. After 6 years of forward thinking development, DigiByte has become one of the safest, fastest, longest and most decentralized UTXO blockchain in existence.
